

F. E. Beamish Lectures

These lectures on Frontiers of Research in Analytical Science have been instituted by the Department of Chemistry of the University of Toronto. The lectures will be held biennially and will be given by a leading researcher in the field of analytical science. This year the inaugural pair of lectures will be delivered by Professor Ingemar Lundström of Linköping Institute of Technology, Sweden.

Professor Lundström's main research interests have been in the fields of semiconductors and surface analysis. He currently heads an interdisci-

plinary research group consisting of a microbiologist, an organic chemist, a surface catalytic chemist, electrical engineers and physicists. The titles of his lectures will be "Chemical Sensors Based on Catalytic Metals and Semiconductor Structures," and "Surface Analytical Methods and Interfacial Protein Chemistry."

The 1984 F. E. Beamish lectures will be held on September 10th and 12th in Room 158, the Lash Miller Chemical Laboratories, University of Toronto.
