Annual Reports on Analytical Atomic Spectroscopy

VOLUME 6, 1976

This comprehensive and critical report of developments in analytical atomic spectroscopy has been compiled from over 1650 reports received from world-wide correspondents who are internationally recognised authorities in the field and who constitute the Editorial Board. In addition to surveying developments throughout the world published in national or international journals, a particular aim has been to include less widely accessible reports from local, national and international symposia and conferences concerned with atomic spectroscopy.
