Membranes and Molecular Assemblies: The Synkinetic Approach

By Jürgen-Hinrich Fuhrhop,
Freie Universität Berlin, Germany

Jürgen Köning,
Freie Universität Berlin, Germany

Membranes and Molecular Assemblies: The Synkinetic Approach is an inspiring, illustrated text in glorious full colour. It contains 118 colour illustrations and a further 70 in black and white. Great care has been taken to choose graphics that illustrate difficult concepts.

The book describes the wealth of membrane structures realized by chemists mainly within the last two decades - micelles, vesicles, fibres, and surface monolayers - from the point of view of supramolecular chemistry. It puts new emphasis on "synkinetic" procedures for the preparation of non-covalent assemblies as well as their structural characterization by electron microscopy, solid state NMR spectroscopy, and comparison to X-ray crystal structures. The supramolecular structure of well-defined molecular assemblies and their use as complex reaction systems is also emphasized. Stereoselective surface recognition, asymmetric membranes, vectorial photoreactions, solid molecular bilayers in the form of tubules or helical rods, and sealable nanopores in membranes or on electrode surfaces are a few outstanding examples. In addition, the importance of well-defined gaps on surfaces and within membranes and crystals is discussed in context for the first time.

Container Molecules and Their Guests

By Donald J. Cram, *University of California, Los Angeles, USA*

Jane M. Cram, *University of California, Los Angeles, USA*

This volume covers the evolution of host-guest complexation chemistry in the minds and hands of Nobel Prize winner Donald Cram and his co-workers at UCLA, over the 25-year period from 1970-1994. It deals with the fundamental principles and objectives that govern this rapidly developing subject and illustrates the emergence of a new field of biomimetic chemistry.

Industrial Inorganic Chemicals: Production and Uses

Edited by R. Thompson, CBE, *Consultant*

Industrial Inorganic Chemicals: Production and Uses pulls together authoritative contributions from acknowledged experts to form a comprehensive, sector-by-sector review of the contemporary inorganic chemicals industry, with a global overview of its importance. It shows how different parts of the industry integrate and supply others, placing production and consumption rates in relative as well as absolute perspective. Chapters cover commodity and specialty inorganic chemicals, with the production and uses of derived products described in detail.

The book describes how the last two decades have witnessed a cleaning up of an industry with a reputation for damaging health and environments. It shows the role in this of tightening legislation and practical action, with particular reference to metals smelting and the physical treatment and use of production by-products. It also addresses perceived shortcomings in the teaching of 'pure' chemistry courses, which often fail to prepare graduates for entry into manufacturing.

Trace Element Medicine and Chelation Therapy

By David M. Taylor, *University of Wales, Cardiff*
David R. Williams, OBE, *University of Wales, Cardiff*

This book discusses, in relatively simple language, the importance of even minute amounts of certain trace elements for the protection of human health and how insufficiency or excess may produce serious diseases. It also examines the use of metal chelators in the treatment of such diseases. **Trace Element Medicine and Chelation Therapy** looks at the role of metal ions in the evolution and development of living systems and reviews the elemental composition of the human body, the essential biochemistry of metal ions, metal complexes, and the concepts of chemical speciation, as well as the interactions of metals with chelating agents, ligands and drugs. The problems of delivering adequate amounts of trace elements to the human body and the roles of metal containing drugs are also discussed, while the role of chelating agents in the treatment of both spontaneous and accidental overload and the dietary and environmental aspects of such treatment are both comprehensively reviewed.

Insights into Speciality Inorganic Chemicals

Edited by David Thompson, *Consulting Chemist, Reading, UK*

Insights into Speciality Inorganic Chemicals details the most significant applications of inorganic chemistry research. Written by both academic and industrial researchers, it gives an up to date account of how chemical knowledge translates to manufacturing and the marketplace, covering this intriguing subject in depth and detail.

It covers a wide variety of topics: refining; pharmaceuticals; homogeneous and heterogeneous catalysts for chemical processing; catalysts for stereospecific synthesis and solar energy conversion; catalytic systems for pollution control; materials with electrical and magnetic properties; superconductors; inorganic colours, ceramics, glasses, and hard metals; corrosion inhibitors; and inorganic chemicals in water purification and the nuclear industry. It will stimulate constructive thoughts on directions for future research in any of these areas.

Insights into Speciality Inorganic Chemicals is for final year undergraduates and newly-qualified graduates and PhD students, and provides a valuable overview of the state of knowledge in this fascinating area for researchers at all levels in academia and industry.

Current Topics in the Chemistry of Boron

Edited by George W. Kabalka,
The University of Tennessee, USA

Current Topics in the Chemistry of Boron provides a summary of the current status of boron chemistry. It is unique in representing essentially every research group utilizing boron, as well as those world class groups not usually associated with the element, yet who are carrying out ground-breaking research in the area.

The book highlights the latest developments in all areas of boron chemistry. These encompass a variety of topics, including theoretical and spectroscopic studies and applications in organic synthesis and medicinal chemistry, in which boron neutron capture therapy features prominently.
